Samsung aircon remote control symbols. Samsung air conditioner remote symbols.

Note that info here is specifcally for Aussie products only, so if you're somewhere else, your product and settings will be different. Click this link to get to a support page that's local to you. The Samsung air con has got some nifty features that let you stay comfy 24/7. You can choose from Auto Mode, Heat Mode, Cool Mode, and more. Just set it and chill - your AC will take care of the rest. Below, we've got a rundown on what each mode does and how to get started with the remote control. The remote's pretty handy for managing all the functions. Note that to switch between Celsius and Fahrenheit (and back again), you'll need to press and hold the SET button for three seconds. If your remote needs replacing, you can grab a new one here - just remember that display and features might vary depending on what model you've got. Selecting an operation mode is as easy as pressing the Mode button - this lets you switch between Auto, Cool, Dry, Fan, or Heat. You'll also be able to use AI Auto mode if your Wi-Fi's connected. To control the temperature in each mode, just press the Temperature button and choose from a range of fan speeds. You can even keep the airflow going in one direction by stopping the vertical and horizontal blades. The Wind-Free Cooling function is another cool feature (pun intended) - it uses fine holes to give you a gentle breeze instead of blowing air directly at you. Press the Wind-Free button to turn it on or off, but remember that this only works in Cool, Dry, or Fan mode. If you're using Wind-Free Cooling in Cool mode, the recommended temperature is between 24 and 26 degrees Celsius. Auto Mode's pretty straightforward - just press 'Mode' and then select 'Auto', and your AC will automatically reach the desired temperature. But if you've got Wi-Fi connected, things get a bit more advanced with AI Auto Mode - this uses learned user patterns to figure out what mode to use (Cool, Dry, Heat, or Wind-Free Cooling). The favourite temperature is also saved, so you don't have to worry about adjusting it every time. Your Samsung air conditioner remote control offers various features to customize your comfort experience. The temperature settings are based on indoor and outdoor temperatures, as well as user patterns. Choose from Cool, Dry, or Fan modes: Cool for hot weather, Dry for rainy or humid conditions, and Fan for a breeze without heating or cooling. The Fast and Quiet functions can be accessed in Cool or Heat mode. Fast increases the unit's speed, while Quiet reduces operating noise. You cannot change fan speed, but you can adjust temperature and airflow direction. These functions cancel Wind-Free Cooling, Eco, and good'sleep modes. The Eco function helps reduce electricity consumption while maintaining your desired temperature. Select this option in Cool or Heat mode to optimize energy efficiency. The MAX Cool temperature is 30°C, MIN Cool is 24°C, MAX Heat is 30°C, and MIN Heat is 16°C. The Eco function cancels Fast, Quiet, Wind-Free Cooling, and good'sleep modes. The Timed on/off feature allows you to schedule the air conditioner's operation for a set duration. This can help conserve energy by only running the unit when needed. To use this feature, press 'Timer' > 'On' or 'Off' > '' > (Input duration) > 'SET'. You can cancel this function by setting the duration to 0.0. To change temperature settings in each mode, press the '+' and '-' buttons. For further assistance, contact our Chat Support or technical experts at 1300 362 603. How to adjust temperature in various modes: To change temp, press the temp button (+/-) regardless of mode (Auto, Cool, Dry, Fan, Heat). Some tips apply only to specific modes. Tips: * In Auto, Cool, and Heat modes, adjust temp by 1°C (16-30°C). * In Dry mode, adjust temp by 1°C (18-30°C). * No temperature control in Fan mode. * In Auto mode, the AC automatically adjusts fan speed and airflow direction based on room temp and set temp. Modes: * Auto: performs powerful cooling or heating to reach desired temp. The AC will then control fan speed and airflow direction. * Cool: cools the space. Adjust temp and fan speed as needed. If outdoor temp is higher than indoor, it may take longer to cool. * Quiet mode available in Cool mode for a quieter indoor unit. * Dry (Dehumidification): removes excess moisture from air, useful on rainy or humid days. Tips: * To cool quickly, adjust to lower temp and faster fan speed. * For energy efficiency, choose higher temp and slower fan speed. * Keep the temperature difference between inside and outside air within 5°C for optimal comfort. difference between current and desired temperature so cold air comes out when outdoor unit runs. To set Dry Mode: press mode button, select Dry, useful for dehumidifying at temps 24-26 ℃. Don't use dry mode for heating! Fan mode is like a normal floor fan, just a nice breeze without cooling or heating. Use it to ventilate stale air and refresh the space. To enter fan mode, press Mode button then select Fan. Heat mode does both heating and cooling, handy in winter when it's very cold. The AC might not blow cold air at first (3-5 min) to warm up sufficiently. Heating ability decreases when outdoor temp is extremely low. Use Quiet setting for a quieter indoor unit when running in Heat mode. You can also adjust airflow direction by pressing the Airflow button and selecting your preferred direction. Good tips: manually changing vertical airflow blades might not close fully when shutting down the AC, use remote control instead. You cannot control airflow direction in Cool mode with Good sleep function activated. Display lighting option allows you to turn on/off indoor unit display lighting by pressing Option button, then Select Display, and finally press Using your Samsung air conditioner's timer feature is a great way to save energy. This function lets you schedule when the AC turns on or off automatically, so you can use it more efficiently. To turn the timer on/off function on, press the Power button, then select Timer and choose whether you want it to be On or Off. Next, set the desired time using the Select button, and press Set once done. Make sure not to set the same time for both On and Off functions. Some important things to remember: if you want to turn off the timer function, set the duration to 0.0 hours. You can also set the duration from 0.5 hours up to 24 hours. Once you enable the Timed on/off setting, a timer indicator will appear on your indoor unit's display. Remember, managing your Samsung AC with the remote control is straightforward, and understanding these symbols will help you operate it seamlessly to keep your room cooler and more comfortable.
